

### **CPSIA Statement**

Quality and safety are core principals at Gemline. We have always been committed to providing high quality, safe products for our customers. We continually work with our vendors and our supply chain partners to ensure that federal and state health and safety standards are met. All of our products are designed in compliance with the new Consumer Product Safety Improvement Act (CPSIA) regulations currently in effect, and we offer a broad selection of products that are safe for use by children 12 years and younger.

There have been many inquiries concerning the new CPSIA law, HR 4040, signed into law August 14, 2009. This law requires that all components in children's products meet the new lead limits of 300ppm or less in substrates and 90 ppm new lead limits in surface coating.

Label tracking for children's products is in effect as of August 14, 2009 and Gemline is in compliance with this requirement for any children's product manufactured after this date.

Although the CPSC has put a stay on enforcement of the General Certificate of Compliance (GCC) requirement until February 10, 2011, Gemline maintains GCC forms for all children's products in our line. These documents are available for download on our website, or can be furnished to customers upon request.

Third party test reports will be available upon request for items manufactured after August 14, 2009 that fall under regulations for lead in surface coatings.

Gemline will continue to monitor changes in the CPSIA timelines and regulations in order to ensure compliance with applications and regulations.
