

Aware™ is the solution for the new era, building trust in sustainability.

Gemline is first company in the US to collaborate with Aware, the worlds' first hybrid traceability technology.

STEP 3
Scan QR Code to access the Aware™ Virtual ID & Product Passport.

WATCH THE VIDEO

How it Works

Aware™ traceability technology works like a virtual passport to authenticate sustainable materials throughout the production process – from textile to consumer, in 3 easy steps.

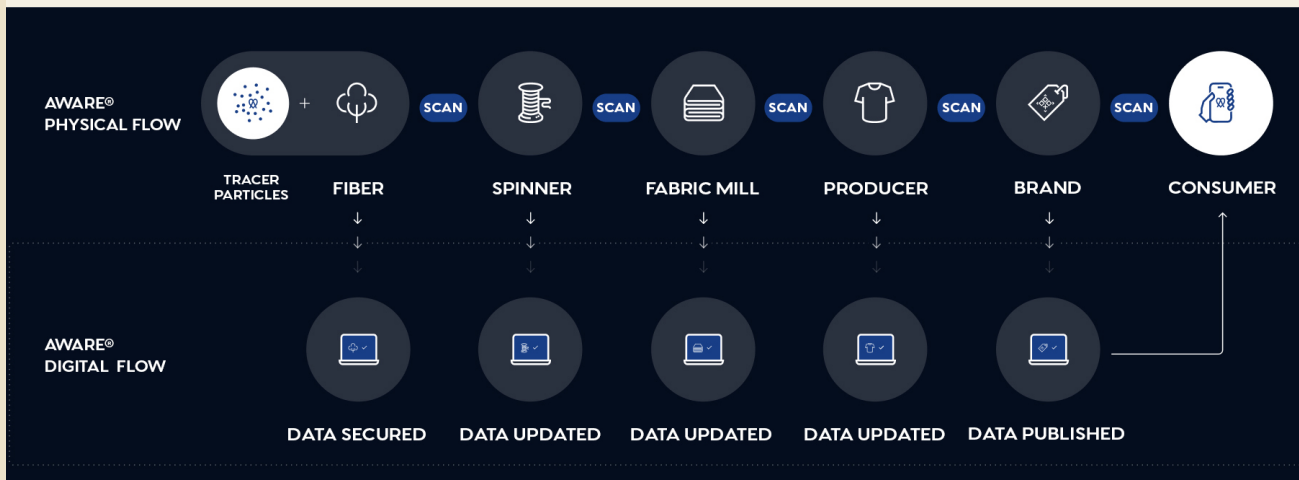

STEP 1

Aware™ Tracer Particles are added to the recycled fiber, and the fiber is spun into yarn. These particles can be tracked during each stage of the production process.

STEP 2

The Aware™ Tracer Particles are then scanned at each step in the process to verify that none of the properties have changed during its journey to the consumer.

STEP 3

The Aware™ Virtual ID & Product Passport can be accessed on your phone with a quick scan of the QR code that's sewn into each bag providing easy access to meaningful and trusted impact data. Including:

Materials

Material composition of product

Product Journey

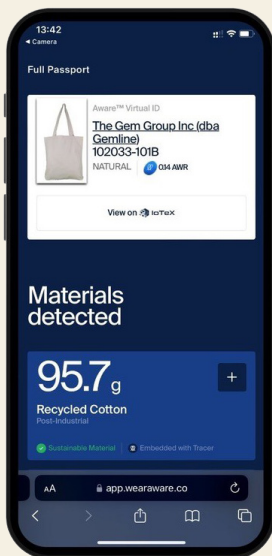

See the entire supply network and the origin of your product.
